

Visionnaire provided email infrastructure support for two domains, along with skilled labor support

Amitech specializes in architecture and planning, utilizing high-precision LASER LIDAR 3D scanning for generating technical documentations, aiding strategic decision-making through point clouds, 3D modeling, and various architectural details. Their requirement was email infrastructure support for both Amitech and their partner, Arte Maggiore – Architecture and Restoration.

Visionnaire provided comprehensive email server support for the domains <https://amitech.tech/> and <https://www.artemaggiore.com.br/>, opting for KingHost Email Hosting. Our services covered POP/SMTP/IMAP protocol support, Webmail, mobile and desktop email configurations, along with installation, configuration, migration, and monthly technical support. Visionnaire's proactive website monitoring systems ensured server uptime and quick reactivation if needed.

With *expertise* in system development and maintenance, Visionnaire offers on-site and remote technical assistance, cloud support, continuous maintenance, and system improvements. We can also develop custom solutions based on client needs, making their services tailored to each client's size, sector, technology requirements, and strategic goals.

Opting for Visionnaire's managed services ensures reliable IT infrastructure management, allowing clients to focus on core activities without technical concerns.

Amitech Tecnologia successfully obtained email infrastructure support for both domains, benefiting from support for various protocols, Webmail, and multi-platform email configurations, backed by Visionnaire's monthly technical support.

Technologically, Visionnaire excels in Amazon Web Services (AWS), specializing in VMs, DevOps, and CI/CD. We also have expertise in Google Cloud, Microvirtualization, Docker, Kubernetes, and Microservices. Visionnaire implements Microsoft systems, works with Windows and virtual Linux servers on Azure, configures AD and LDAP in the cloud, and migrates Local Networks to Cloud Networks.

Our Service Desk and HelpDesk tools, including Jira Service Desk and Zendesk, along with automations like Selenium, IFTTT, and Zapier, ensure client systems remain operational. We offer diverse cloud solutions, both platform and storage, in private and public clouds, maximizing cloud investment returns.
