

Top Aviation needed a new website, and Visionnaire created an easy-to-manage one

Top Aviation is a company specialized in aircraft maintenance and repair, providing services such as Aircraft Management, Aeronautical Insurance, Crew Management, Ground Services, Hangarages, Supplies, Charters, Transport of Orders and Values, in addition to Special Operations. The company also markets new and used aircraft, parts, and accessories.

Top Aviation's need was to have a new corporate website, informative, modern and beautiful, living up to the quality of services provided by the company. It was also necessary to provide autonomy and independence to the company's content creators. There was also the need to promote support for the new Top Aviation website. Therefore, it was not enough to limit itself to the creation of the new site.

Top Aviation also needed the implementation, hosting, maintenance, and monitoring of the developed project, to be consolidated in a Datacenter environment in the cloud, as well as the services for the e-mail server and the sending of transactional e-mails.

Visionnaire has its own CMS (Content Management System) solution, named WebPublication. It is a complete and customizable tool for creating, managing, and maintaining websites, therefore ideal for Top Aviation's needs.

WebPublication enabled Top Aviation not only to create a new responsive website (that is, one that adapts to the user's screen size), but also to generate, publish and manage content on its new portal.

Visionnaire also carried out the deployment, hosting, maintenance and monitoring of the developed project, all in a cloud environment. Using the most famous solutions in the world market, such as Amazon Web Services, Google Cloud and Microsoft Azure, the project was carried out in a safe environment. Visionnaire also provided backup services for servers, virtual machines and data, since it specializes in using tools like Google Nearline and AWS Glacier. For the e-mail service, Visionnaire led the migration of the domain's servers topaviation.net.br.
