CITS – New Portal of Centro  
Internacional de Tecnologia de Software

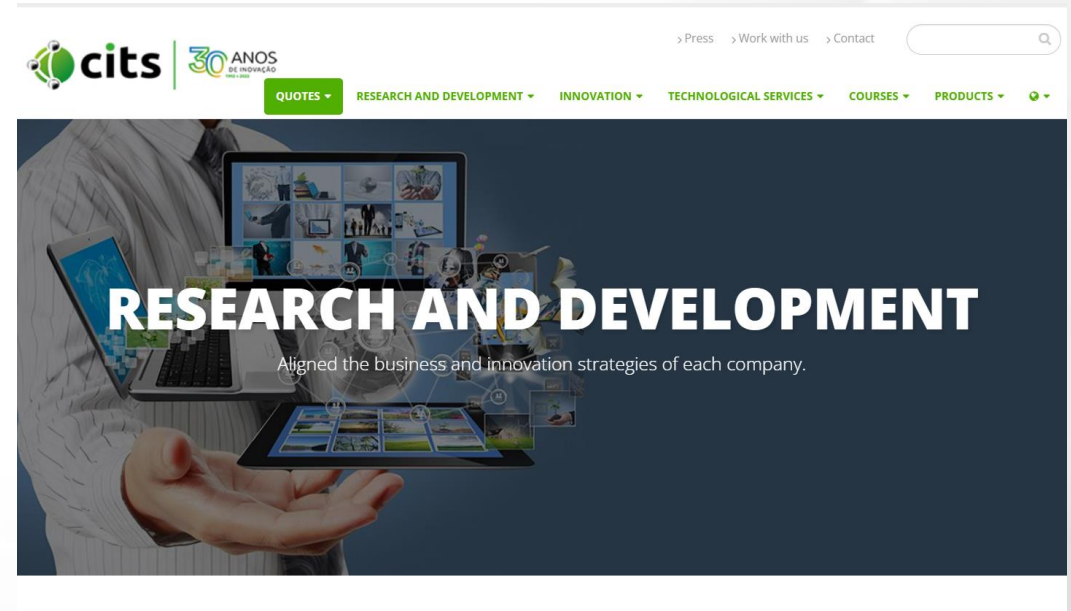

# Problem

Centro Internacional de Tecnología de Software (CITS) needed a new institutional portal to better communicate, internally and externally, with its customers and associates, and that also was in line with the new internet guidelines, modern, internationalized and adapted for viewing on devices such as mobile phones and tablets.

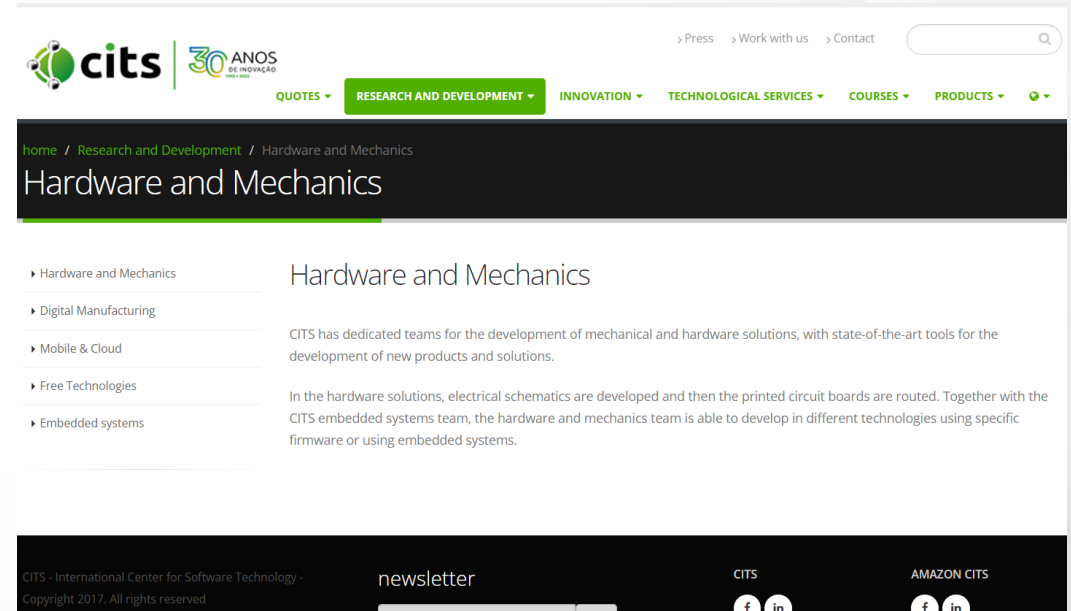

# Solution

Visionnaire, in an agile and collaborative way, developed a new modern portal, using the WebPublication platform, to support the translation of content and with responsive design.

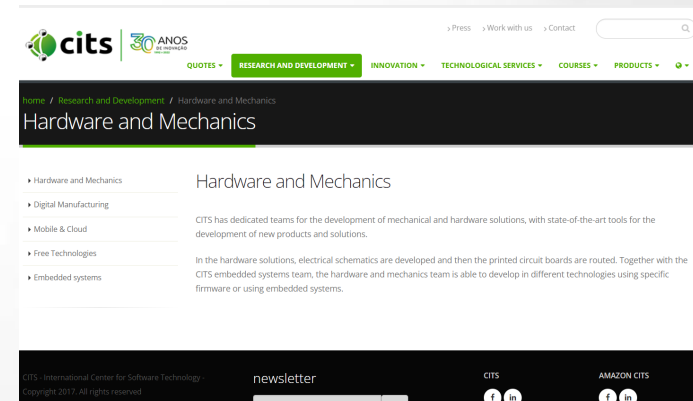

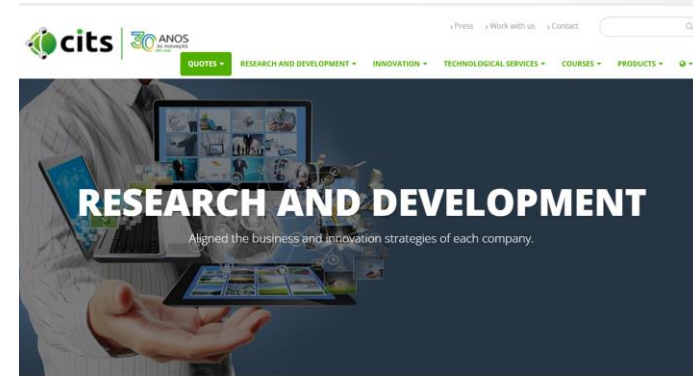

# Results

Modernity, ease in updating content, new employees updating their departments independently, and with control and approval in the flow of updates, through workflow. Possibility of sending newsletters through the website itself.
