VISIONNAIRE

Success Case

Editora Positivo – Training Center Android Application

Problem

Editora Positivo made all of its materials and control enrollment for its courses manually, and after the creation of its web system to control the courses offered by the institution to its clients, the need arose to integrate this Service with a mobile application, which would have the mission to optimize the process for registration and attendance records in its events and training.

VISIONNAIRE

Solution

Visionnaire was responsible for developing the solution called Training Center, the project made possible the accomplishment of the control of registrations and confirmation of presence in the courses of the institution. The solution was developed for the Android platform, and offered the functionality of reading QR Code, with the differential of possibility of use in offline mode.

Software Development
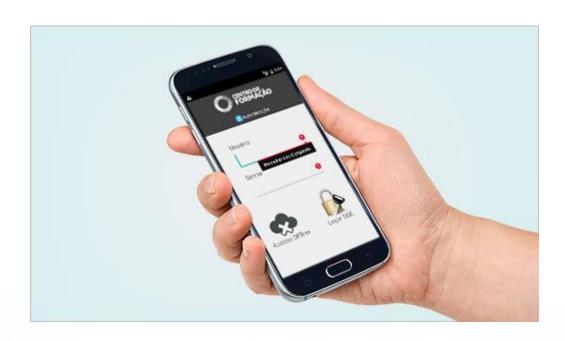

Corporate Sites and Portals

VISIONNAIRE

Results

With the new mobile application (app) developed for Editora Positivo, the registration process for attendance optimized a number of functionalities, such as certificate issuance, attendance control and control of people from the same class.
