## **Success Case**

FIEP — Internet Portal

# Problem

The Federation of Industries of the State of Paraná (FIEP) needed to unify, in a single internet portal, all entities related to it. The volume of information was vast and originated in different cities, and all the content update work was centralized in a single team, which executed it manually.

# Solution

With the implementation of Visionnaire WebPublication, a Content Management System (CMS), it became possible to manage all FIEP internet portal content safely and efficiently. This solution is what allows the creation of an unlimited number of hierarchically organized sites with fully customizable content publishing workflows.

# Results

Today, the FIEP internet portal, which is administered in a decentralized way by 900 users, has over 1,500 sites and 400 thousand contents. Such contents, to be published, undergo workflows that can be completely customized by FIEP.
