**Success Case**

# Modernization and Continuity of System Development with Microsoft Technologies

# Problem

G.Laffitte, specialized in subdivisions and gated communities, sought to modernize its technology operations. Its systems, based on ASP.NET, Access, C#, and Angular, were fragmented, with little validation and heavy reliance on manual processes, limiting efficiency and growth. Legacy code hindered evolution, and dissatisfaction with former suppliers—who lacked agility and adequate support—drove the company to seek a reliable technology partner to maintain and evolve its platforms with professionalism and modern solutions.

Professional Services

Managed Services

VISIONNAIRE

# Solution

Visionnaire stabilized the system's performance, ensuring operability through performance improvements, data validation, and continuous maintenance. The company also provided agile support and modernized parts of the legacy code with updated Microsoft technologies, also using frameworks such as Angular and React. This allowed G.Laffitte to preserve its investment while operating with stability and serving clients more effectively.
