

VISIONNAIRE

Success Case

Technological Infrastructure Support with
Migration, Maintenance, and Monitoring

Problem

Grupo WOS faced serious challenges in its IT infrastructure: outdated, scattered, and unreliable servers, with no cloud usage, which compromised both security and scalability. Additionally, there were no proper backup or contingency policies.

Solution

Visionnaire proposed a complete cloud-based technical support solution, covering the migration of Grupo WOS's systems and websites to secure, high-availability servers with continuous monitoring.

Results

Grupo WOS achieved improved system and website availability, reduced downtime and failures, enhanced security, greater team productivity, and specialized technical support.
