VISIONNAIRE

Success Case

PUCPR – Workforce Planning for System Development and Documentation

Problem

Need to assist in the assembly of a high-performance development team to work in the PUCPR's academic system following a software factory model with performance measured by Function Point Analysis (FPA) techniques.

VISIONNAIRE

Solution

Assembling a team in a software factory model, managed by agile development techniques, with payments linked to developments measured by Function Point Analysis (FPA) techniques.

VISIONNAIRE

Results

Complementation of the development capacity of the PUCPR technical team, allowing the academic system of the institution to be developed and delivered according to its planning.
