

VISIONNAIRE

Success Case

Technical Support and Portal
Maintenance

Problem

After the FIEPE System portals were implemented, it was necessary to ensure operational continuity and technical support for the platform, with agile service for the teams responsible for the environment.

Solution

Visionnaire won the public tender related to service continuity and maintained a support and maintenance operation with direct contact with FIEPE teams, fast response to requests, and technical availability during planning and reorganization periods.

Results

The support partnership kept Visionnaire as a technical point of contact for the FIEPE System portals, providing agile responses, close collaboration with the IT and Marketing teams, and readiness during periods of internal change.
