

VISIONNAIRE

Success Case

Unimed Curitiba – Management of Medical Fees

Problem

Unimed Curitiba needed an implementation to be carried out in the SCE, which is its system responsible for the treatments related to electronic accounts, both in the web module with the creation of new interfaces, as well as with the creation of a controller module.

Solution

Through the Visionnaire technical team, the entire system engine and its interfaces have been developed and implemented with the function of requesting and making available the data collection by the cooperators, enough to build the reports to be made available later in the medical fees system and the construction of the controller module that provided new validations and generation of TISS files.

Results

The partnership between Visionnaire and Unimed Curitiba provided the necessary changes and implementations to meet the new process of submitting medical fees related to hospitalizations, independently by the members.
