

VISIONNAIRE

Success Case

Unimed Curitiba's Intranet

Problem

Consolidate Unimed Curitiba's corporate information feed and exchange tool in a single area of internal affairs that make a big difference in a company — for example, cafeteria menus, opinions registration area, birthday wall, news channel, contacts and extensions of collaborators — in a friendly internal and private intranet environment.

Solution

Friendly and complete intranet network implemented in a fast and agile way, following the visual identity and all the standards of Unimed Curitiba and with the integration with the Benner management system.

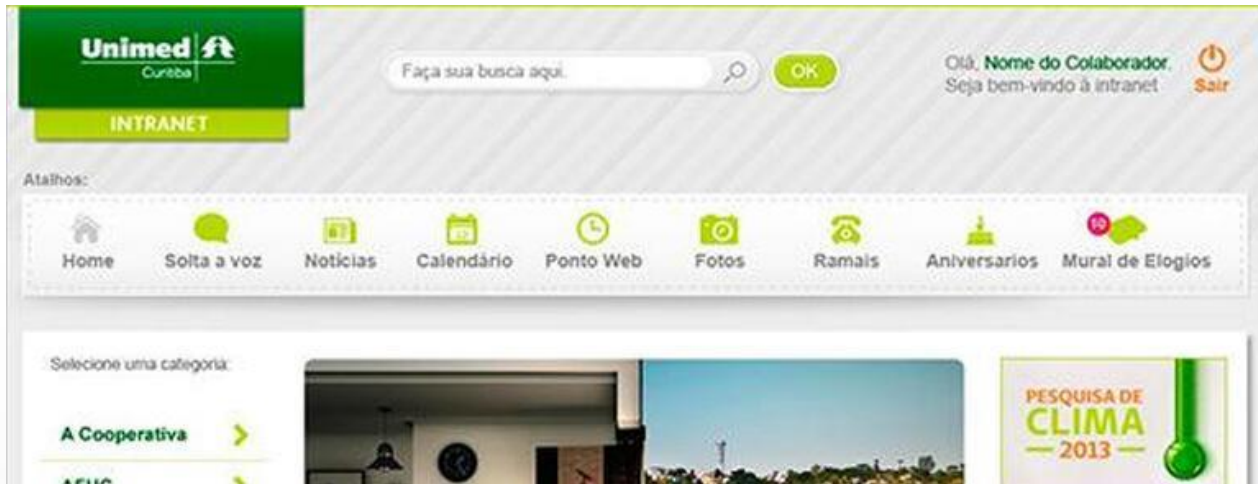

Results

At the end of the project, around a thousand people in different units of the company were able to integrate via intranet with a better flow of information and more productivity in the communication with employees by the board and between sectors and departments.
